

→ PRIVATE OFFICE PARIS, FRANCE

For a private office project in PARIS, we used our LINE S3535 (C) profile to custom design and manufacture an 8-meter structure composed of different lines and corrugations.

This innovative LED linear profile allows you to work in a straight line as well as in a curve in order to trace your own light path! It can be surface mounted or suspended and the variety of curves available allows the creation of free forms. This product gives a huge freedom of expression to architects, designers and interior decorators.
