

# OUTDOOR & FAÇADE

## ➔ LE CUBE ORANGE LA CONFLUENCE, LYON, FRANCE

The Cube Orange was built on the banks of the Saône River near the confluence of the latter with the Rhone in Lyon , France . This flagship project will help boost the old river port city, an old industrial area of warehouses and docks.

The project was designed as a simple "orthogonal nature" within which to dig a giant hole, responding to the needs of light, air and views. This hole creates a vacuum, horizontal drilling in the building that is born into the side facing the river and ascends to terrace.

**SWITCH MADE** lighting contributes in emphasizing the beauty and originality of this orange structure.
